* NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 26679: contig of 26679 by in length.

* 26679: contig of 189249 bp in length.

Location/Qualifiers
                       The order-orientation of the draft sequence was accomplished by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                 (see http://www.ngsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a 'working draft' sequence. It currently consists of 62 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

L. Submitted (13-7002) Human Genome Sequencing Center, Department of Submitted (13-7004-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 13, 2002 this sequence version replaced gi:22855703.

The sequence in this assembly is a combination of BAC based reads and whole genome shorgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a caffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated aize. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome chance and the ends of the clone and sequences and whole genome chance and the ends of the clone and sequences and whole genome chance who whole genome chance will not the capture and the patter of the feature chance will not the capture capture and the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole capture and the capture capture capture will not the capture and the capture capture capture will not the capture capture capture capture will not capture will not capture will not capture capture will not capture capture will not capture will not capture will not capture capt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  * NOTE: Estimated insert size may differ from sequence length

* See http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft" sequence. It currently

* Consists of 1 contigs. Gaps between the contigs.

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and
                                                                                                                                              Worley, K.C.

Submitted (23-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

ON NOV 23, 2002 this sequence version replaced gi:2332270.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Arlas in the feature table below represents a craffold in the Arlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.

ALIGNMENTS

Newly isolated nucleic acid comprising a control region of a human peroxisome proliferator activated receptor (PPAR) gamma gene - useful for identifying modulators that are useful in treating diseases associated with abnormal levels of human PPAR-gamma gene expression. Human; peroxisome proliferator activated receptor gamma; PPAR-gamma; regulatory sequence; promoter; obesity; anorexia; lipoma; cachexia; lipodystrophy; liposarcoma; human immunodeficiency virus; HIV; insulin resistance; non-insulin-dependent diabetes mellitus; polycystic ovary syndrome; gastrointestinal tract; Crohn's disease; inflammatory bowel disease; ulcerative colitis; bowel cancer; ss. oximal promoter, exon B and intron B. The present invention describes an isolated, purified or enriched nucleic acid comprising a control region of a human peroxisome proliferator

```
cortivated receptor gamma (PPDAR-gamma) gene. The nucleic acids are useful for secreening for agents capable of modulating the expression of a human PPDAR-gamma gene. These agents (modulators) (form pharmaceutical compositions that are useful for treating diseases associated with high/low levels of human PPDAR-gamma gene expression. The diseases include observing the cachexia, lipodystrophy, lipomas, lipomas. Ilpomas comes abnormalities associated with anti-human immunodeficiency virus (HIV) treatment, insulin resistance, non-insulin-dependent diabetes mellitus abnormalities associated with anti-human immunodeficiency virus (HIV) treatment, insulin resistance, non-insulin-dependent diabetes mellitus commander, insulin resistance, non-insulin-dependent diabetes mellitus tract, inflammatory bowel disease, Crohn's diseases of the gastrointeerinal (GI) tract, inflammatory bowel disease, Crohn's diseases ulcerative colitis and bowel cancer. The nucleic acids are useful for studying the role of PPAR-gamma enables genetic studies of PPAR-gamma mutations in humans, and elseases associated with altered adipose tissue function, like and elseases associated with altered adipose tissue function, like obesity and the production of transgenic animals, which are useful in screening for modulators of the human PPAR-gamma gene, which are useful in designing drugs for treating disorders or diseases associated with the level of PPAR-gamma gene expression. The present sequence with the level of PPAR-gamma - 2 proximal promoter, exon B and intron B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          998 GCAAGAGATTTAAGTTTTTCCATTTAAGAAGCCATTGTGAATTATACAACAATAAAAATG 1057

Peroxisome proliferator-activated receptors (PPARs) are members of the nuclear hormone receptor subfamily of transcription factors. The present invention relates to antisense oligonucleotides (see AAF23652-F23731), targeted to a nucleic acid molecule encoding human PPARgamma, which specifically hybridises with and inhibits the expression of human PPARgamma. The present sequence is the coding sequence for the N-terminal sequence of human PPARgamma antisense oligonucleotides of the present invention can be used in the diagnosis and treatment of diseases associated with the expression of PPARgamma, e.g. to prevent or delay infection, inflammation or tumour formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      298

The invention describes a method for preparing nucleic acid that can be detected in thyroid cancers where these contain an absordescribes constructs comprising a fragment of the human DRIP gene and its splice variants, one of which contains all of exons 1-38 while the other lacks exons 27 and 28. Some tumours contain a fusion protein of DRIP, including a small segment from chromosome 3. The products of the invention have cytostatic and thyromimetic activity and are used for the inhibition of nucleic acid expression by antisense, ribozyme or RNA interference (RNA) methods. This sequence represents a fragment of human

   ò
                        The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatcoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA cand protein sequences of the invention are useful for disquassing and treating autoimmune diseases, such as rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, psornicious anaemia, asthma, vitiligo, glomerulonephitis, Grave's disease, anaemia, asthma, vitiligo, glomerulonephitis, Grave's disease, myocarditis, Ihe present sequence is not resent nucleic acid represents a human autoimmune disease-related control of the invention. NoTE: The present sequence is not control of the invention. NoTE: The present sequence is not control of the invention when the WIPO, whether

The invention relates to determining whether a subject has, or is at risk of developing, an abnormally low high density lipoprotein-C (HDL-C) level comprises determining whether the subject has an allelic variant of a polymorphic region from any of 27 genes (alleles listed in Table 5 of the specification). Also included are determining whether a male subject has, or is at risk of developing, an abnormally low HDL-C level, comprising determining whether the male subject has an allelic variant of a polymorphic region listed in Table 5 which is associated with abnormally con HDL-C levels in males, and determining whether a female subject has, or is at risk of developing, an abnormally low HDL-C level, comprising determining whether the female subject has an allelic variant of a colymorphic region listed in Table 5 which is associated with abnormally low HDL-C levels in females. The allelic variant in determining whether a subject has, or is at risk of developing, an abnormally low HDL-C level complements. The allelic variant is at risk of developing, an abnormally low HDL-C level is at risk of developing, an abnormally low HDL-C level (GG, or their complements. The allelic variants are also COLSA2 (C GG, or their C GG, C C GG, or their complements. The allelic variants are also COLSA2 (C GG, Or their C GG, C C G GG, Or their C GMPL-C) in a complements. The methods are useful for diagnosing (a predisposition to) as undership as a variant and metable sassociated with abnormal liptid and metable metable of complements. The methods are useful in diagnosing (a predisposition to) are subject. The methods are useful in diagnosing (a predisposition to) are subject. The methods are useful in diagnosing (a predisposition to) are subject. The methods are useful in diagnosing (a predisposition to) are subject. The methods are useful in diagnosing (a predisposition to) are subject. The methods are useful in diagnosing (a predisposition to) are prognessicating the prognessicating and metable of low high density liptoprotein-C (

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes established fat cell precursors with a DNA structure where the Stat5 gene is ligated in a state which allows its expression downstream of a promoter domain which can be induced by doxycycline. Also described: (1) screening compounds with an activity of controlling the induction of differentiation into fat cells comprising: (a) inducing the differentiation into fat cells in the fat cell precursors, (b) contacting a test compound with these cells after induction of their differentiation into fat cells; (c) measuring extent of the differentiation into fat cells; and (d) comparing
                                                                                                                                                         359
                                                                                                                                                                                                                                                             479
                                                                                                                                                                                                           419

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     467
the extent of differentiation into fat cells with that observed in a control for evaluation of activity of the test compound, during which the order of steps (a) and (b) can be changed or carried out simultaneously before steps (c) and (d); (2) screened compounds inhibiting the differentiation of fat cell precursors into fat cells; and (3) screened compounds promoting the differentiation of fat cell precursors into fat cells. Staff as anorectic activity. The method is useful for the preparation of established fat cell precursors for application in screening candidate compounds for controlling induction of differentiation into fat cells, which are useful in treating e.g. obesity. The present sequence represents the mouse peroxisome proliferator activated protein-gamma-2 (PPAR-gamma) promoter, which is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The specification describes a method for the preparation of immunoglobulins. The method uses a vector for reverting cell lines to a pro-B cell-like state or to a germline-like state, by replacing one or more of the immunoglobulin regions V, D, and J of the rearranged immunoglobulin gene with the germ-line or unrearranged V, D or J regions. The vector can comprise a polymucleotide sequence encoding a recombination-promoting protein, selected from recombination activating gene 1 (RAG-1), RAG-2, terminal deoxymucleotidyltransferase (TdT). These proteins collectively constitute a V(D)J recombinase. The method is useful for the preparation of immunoglobulin heavy and/or light chains and their fragments. The present sequence encodes a human immunoglobulin heavy chain variable region, and is used as a template to construct vectors for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30 TCAGTAGCATGCTGATACCAACGTTTAAACTATGGATACATATTTGAATTCCAAATTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated, purified or enriched nucleic acid comprising a control region of a human peroxisome proliferator acid comprising a control region of a human peroxisome proliferator activated receptor gamma (PPAR-gamma) gene. The nucleic acids are useful for servening for agents capable of modulating the expression of a human PPAR-gamma gene. These agents (modulating the expression of a human CPPAR-gamma gene which acids as associated with high/low levels of human PPAR-gamma gene expression. The diseases include obesity, anorexia, cachexia, lipodystrophy, lipomas, lipodascomas, abnormalities associated with anti-human immunodeficiency virus (HIV) treatment, inflammatory bowel disease, non-insulin-dependent diabetes mellitus (NIDDM), polycystic ovary syndrome, disease, ulcerative colitis and bowel cancer. The nucleic acids are useful for studying the role of the PPAR-gamma enables genetic studies of PPAR-gamma enables genetic studies of PPAR-gamma enables genetic studies of PPAR-gamma mables genetic studies of PPAR-gamma mables genetic studies of PPAR-gamma in humans, and diseases associated with altered adipose tissue function, like and diseases associated with altered adipose tissue function, like for gene therapy and the production of transgenic animals, which are useful in designing drugs for treating disorders or diseases associated with the level of PPAR-gamma gene expression. The present sequence useful in designing drugs for treating disorders or diseases associated with the level of PPAR-gamma one expression. The present sequence tepresents the human PPAR-gamma one expression. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                      Newly isolated nucleic acid comprising a control region of a human peroxisome proliferator activated receptor (PPAR) gamma gene - useful for identifying modulators that are useful in treating diseases associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunoglobulin, B cell; germline; region V; region D; region J; recombination-promoting protein; recombination activating gene 1; RAG-1; RAG-2; 88; terminal deoxynucleotidyltransferase; TdT; V(D)J recombinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA sequence of a human immunoglobulin heavy chain variable region.

2002-527544/56 P-PSDB; ABP51420. Novel human disease detection and treatment polypeptide, useful in diagnosis, prevention or treatment of cell proliferative disorders e.g. arteriosclerosis, cirrhosis and an autoimmune/inflammatory disorder e.g.

Claim 1; Page 407-408; 618pp; English.

The invention relates to an isolated human disease detection and treatment (MDDT) polypeptide (I) selected from a polypeptide having a sequence selected from 254 sequences (ABP5121-ABP518484) given in the sequence selected from 254 sequences (ABP5121-ABP51848) given in the section, a naturally occurring polypeptide comprising a sequence having at least 90% identity to (I) or a biologically active or immunogenic fragment of (I). (I) is useful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound that specifically binds (II) (ABP07249-ABP72700) encoding (I), and for preparing a polyclonal or monoclonal antibody by hybridoma technology.

CN Nucleic acids (II) (ABP07249-ABP72700) encoding (I) are useful for screening a compound for effectiveness in altering expression of a target polynucleotide comprising. Oligonucleotides and antibodies are useful for detecting MDDT in a sample or for assessing toxicity of a test compound, in a diagnostic test for a condition or a disease associated with the expression of MDDT in a bample, for detecting (I) in a sample, and for purifying (I) from a sample. A composition comprising (I), an

agonist or antagonist is useful for treating a disease or condition or suscotated with decreased or increased expression of functional MDDT. (I) or (II) are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, cirrhosis, hepatitis, psoriasis, and cancer and an arteriosclerosis, autoimmune/inflammatory disorder such as AIDS, Addison's disease, allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or rheumatorid arthritis. (II) are useful for creating knockin humanised animals or transgenic animals to model human diseases, in sometic or type, for detecting differences in the chromosomal location due to translocation or inversion among normal, carrier or affected individuals and as hybridisation probes for mapping naturally occurring genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    312

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheijesy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

The invention relates to a novel isolated enzyme protein and encoding colymucleotides. The protein shows a high degree of similarity to a glucuronyltransferase cloned from a rabbit brain cDNA library. The glucuronyltransferase cloned from a rabbit brain cDNA library. The carelopment of human therapeutic targets, aid in the identification of therapeutic proteins, and serve as targets for the development of human the peptide may be used in drug screening assays, in the peptide may be used in drug screening assays, in assays to determine the biological activity of the protein, to raise antibodies or to elicit another immune response, as a reagent in assays cantibodies or to elicit another immune response, as a reagent in biological for fluids, or as markers for tissues in which the corresponding protein is preferentially expressed. The human enzyme protein is also useful for diagnosing a disease, predisposition to a disease, or treating a disorder characterized by an absence of, inappropriate or unwanted expression of the protein. The antibodies are useful in pharmacogenomic analysis, for inhibiting protein function, or for tissue typing. The nucleic acid molecules are useful as probes, primers, chemical intermediates, or in min biological assays. The present sequence represents a human enzyme protein a biological assays. The present sequence represents a human enzyme protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      42 TGATACCAACGTTTAAACTATGGATACATATTTGAATTTCCAAATTTTTCTTCAGATAATG 101
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   162 GCTTTCTGGTATTTCATAAGCAAGAGATTTAAGGTTTTCCATTTAAGAAGCCATTGTGAAT

The invention relates to a recombinant entomopox virus (EPV) vector, comprising a polynucleotide encoding a protein operably linked with a comprising a polynucleotide encoding a protein also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polynucleotide encoding a protein cinvention are useful for delivering a polynucleotide encoding a protein to a vertebrate cell by infection in a viral particle, or by transfection, transduction, or injection either in vitro or in vivo. The vector is useful for the delivery and expression of particle, or by transfection, transduction, or injection either in vitro or in vivo. The vector is useful for the delivery and expression of biologically useful proteins in gene therapy protocols, and for delivering large DNA segments for engineering of vertebrate cells. Polynucleotides of the invention have applications in techniques such as their use as insertion sites for foreign genes of interest, hybridisation provide for stable integration and expression of heterologous DNA in host provide for stable integration and expression of heterologous DNA in host provide for stable integration and expression of the invention of sense or antisense nucleic acids. Vectors of the invention provide for stable integration and expression of heterologous DNA in host cells, and are adapted for accepting large heterologous polynucleotide inserts which can be delivered in an infected or transformed cell and expressed in a stable fraction. The current sequence represents a correction amsacta moorei fragment of the genome of the genus B entomopoxvirus from amsacta moorei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4783 TTÄTACATÄTÄÄÄCTTAATTÄTTÄTATTÄÄTTÄTTÄTTATAATÄÄTÄTÄTGÄÄÄTTÄTC 4842

The invention relates to plant nucleotide sequences that direct seed.,

leaf- and/or stem., panicle., root- or pollen-specific or -preferential

or constitutive transcription of an operatively linked nucleic acid

segment. The invention also relates to a method for augmenting a plant

genome and a method of identifying a gene, where its expression is

altered in the seed, leaf, stem, panicle, pollen, root or is constitutive

in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,

cancia, cotton, peanut, tobacco or sugar beet, preferably maize, barley,

sorghum, rice or wheat. The polymucleotides and the polypeptides they

concide are useful for manipulating crop plants to alter or improve

phenotypic characteristics, to produce large quantities of oil or

proteins, to incur resistance to insecticides, viruses or fungi, and to

cincur stress tolerance (e.g. salt, cold or drought) to ensure the plants

carly flowering or altered metabolic pathways. This sequence represents a
                                                                                                                                                                                                                                           Plant; gene; se; transcription; plant genome augmentation; cereal; soybean; alfalfa; sunflower; canola; cotton; peanut; tobacco; sugar beet; maize; barley; sorghum; rice; wheat; crop plant; insecticide resistance; stress tolarance; salt tolarance; cold tolarance; drought tolarance; plant nutrition; apical dominance; dwarfism; early flowering; antiviral;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New rice promoter, useful for manipulating crop plants to alter or improve phenotypic characteristics, e.g. produce large quantities of oil or proteins, resistance to insecticides, virus or fungi, stress tolerance or high nutritional value.

plant nucleic acid of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated cancer associated nucleic acids comprising at least 10 contiguous nucleotides, useful for diagnosing, preventing and/or treating cancers such as leukemia and lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to cancer associated sequences (ADQ97025-ADQ98004). The sequences are useful for the diagnosis, prevention and/or treatment of cancer, such as leukemia and lymphoma. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formate directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 109661 BP; 30680 A; 19371 C; 19986 G; 35350 T; 0 U; 4274 Other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1
